

The Board of Education is committed to learning and teaching. It considers computer networks and the Internet to be valuable tools for the education of students and the administration of the District and encourages the use of computer related technology. Also in line with the Burnt Hills - Ballston Lake School District's mission and goals, the Board of Education extends to District staff and students the privilege of using computers to access the District's File Servers and the Internet to help perform academic work, to explore educational topics, and to conduct research projects. The privilege of using computers in school may be revoked at any time if a staff member or student fails to comply with District policy and regulations. The District will ensure that electronic material is presented in a safe, supervised environment.

The rules and regulations relating to the use of the district's computer networks are identified in the Administrative Regulations.
